

WORKSHOP ON THE SECURITY OF SMALL MODULAR REACTORS

TARGETED AUDIENCE

This two-day event will limit participation to a maximum of 60 participants. Attendees will be expected to meet their own costs for travel and accommodations, but the organisers will meet all event costs. No registration fee is required. This event is by invitation only and the targeted audience include:

- SMR vendors and designers
- Nuclear engineers and system designers
- Leading researchers and practitioners in SMRs
- Experts in data analytics and associated technological fields
- Business managers who approve security expenditures
- Security managers
- Regulators and other governmental organizations
- Insurance companies
- Transport security experts
- Security experts, consultants and vendors

WINS promotes gender diversity in its events and limited funding support for travel and participation is available for female participants as part of our Gender Champions programme.

EVENT PROCESS

The workshop will consist of presentations and plenary and group discussions. The workshops will be conducted in English and draw only on unclassified information.

The workshop will bring together experts and leading thinkers in SMR technologies and security matters from around the world. This will increase the diversity of perspectives on the topic, give Canadian participants a broad view of similar programs around the world, and support the identification and sharing of international best practices for the security of SMRs.

These efforts are aligned with the CNSC and NRCAN's commitments to promote open and transparent dialogue between the industry and government on SMRs. WINS will produce a workshop report after the event with key findings.

CONTACT INFORMATION AND REGISTRATION

If you wish to register or obtain more information on this event, please contact:
